THE director and staff of La Revue Musicale wish to express their gratitude to UNESCO for the confidence displayed by this international organization in asking La Revue Musicale to carry out the edition and publication of the proceedings of the Stockholm Meeting (June 8-12, 1970) : «Music and Technology».

We would particularly like to thank Mr. Kaj Kauhanen for his very kind and valuable help during the setting up of this publication.

Finally we wish to take this opportunity of sincerely acknowledging the efforts of all the speakers and organizers who contributed to the success of this conference, and especially Mr. William Skyvington who was assigned to the Stockholm Meeting as the official representative of La Revue Musicale, and who has since acted as the editor of both the English and French publications of «Music and Technology».

LA REVUE MUSICALE
INTRODUCTION

THE meeting organized by Unesco in Stockholm with the collaboration of the Fylkingen Society for Contemporary Music from 8-12 June 1970 discussed, under a series of headings, a question which preoccupies most musicians today: the relationship between the arts and technology. This theme figures prominently in Unesco's present cultural programme, and its study will have an important place in future activities. Of all the arts, music seems to be most particularly involved — a view borne out by the very heated discussions in Stockholm, which concentrated on the creative and so to speak material aspects of music's relations with technology. Future meetings will discuss in more detail the social and philosophical aspects which, by their very nature, also had their place in the Stockholm debates.

From the outset, the approach was critical. Has anything of lasting value been achieved during the last twenty years in musical composition by the use of the new means which technology has offered the composer? Does such music have a future? With one exception, all the articles here were written by the participants, all of whom are well-known authorities, and most are composers who have actively contributed to the new world of sound which is called the music of our time. Absorbed daily in this world, they are trying to find the answers. The studies in which their views are published here constituted the basic documentation for the Unesco meeting.

It remains for me to express my deepest gratitude to Mr. Albert Richard, the editor of the «Revue Musicale», without whose warm and constant interest this book would probably never have seen the light.

KAJ KAULAHANEN
